Chromosome 5

5' 3' 5' 3'

The figure displays a genomic track for Chromosome 5. At the top, a chromosome ideogram is shown with a red vertical line indicating a specific genomic location. Below this, a horizontal axis represents the chromosome, with 5' and 3' ends labeled. A large, prominent peak in the H3K4me3 signal (represented by a brown area) is centered under the red line. A smaller peak is visible to the left. The signal is overlaid on a teal line. Below the signal, three purple rectangular blocks represent gene models, with the central one aligned with the main peak.

peakType ■ Distal

Chromosome 9

Coverage (RPGC)

Genes

POLE3

POLE3

POLE3

POLE3

The figure displays a genomic track for Chromosome 9. The top track shows the chromosome's structure with a red vertical line indicating a specific genomic position. Below this, a line graph plots Coverage (RPGC) on the y-axis (ranging from 0 to 10) against the genomic position. A prominent peak in coverage is observed at the position marked by the red line. At the bottom, a gene model for POLE3 is shown, consisting of three exons (yellow) and two introns (orange). The red line is positioned within the first exon of the POLE3 gene model.

peakType ■ Distal

The figure displays genomic tracks for Chromosome 16. The top track shows the chromosome's orientation from 5' to 3'. Below it, a large brown peak indicates a strong BAIAP3 ChIP-seq signal, centered around a red vertical line. At the bottom, gene models are shown as orange arrows pointing right. A green box highlights a specific region on the left, while yellow boxes highlight regions on the right. The labels "BAIAP3" and "B7" are visible near some of the gene models.

peakType  Exonic
 Intronic

Chromosome 6

Coverage (RPGC)

Genes (eaks)

5' 3' 5' 3'

The figure displays a genomic track for Chromosome 6. The top track shows the chromosome with a red vertical line indicating a specific position. Below this, a line plot shows the Coverage (RPGC) across the chromosome, with a prominent peak at the position marked by the red line. The peak reaches a coverage of approximately 20. A blue bar below the peak indicates the location of a gene. The bottom track shows the gene model with exons represented by black boxes and introns by lines with arrows indicating the direction of transcription. The gene is labeled '5' 3' 5' 3'.
