

Chromosome 16

5' 3' 3' 5'

DDX11L10

DDX11L10

The figure displays a genomic track for Chromosome 16. At the top, a scale bar indicates the 5' to 3' orientation of the DNA sequence. Below this, a large, prominent peak is visible, centered over a region marked by a red vertical line. This peak is colored in shades of orange and brown. To the left of the main peak, there are several smaller, distinct peaks, some colored green and others brown. Below the main peak, a purple rectangular box highlights a specific genomic region. At the bottom of the image, two gene models for DDX11L10 are shown, each consisting of a series of yellow arrows pointing to the right, representing the direction of transcription.

Genes

5' 3' 3' 5'

20 15 10 5 0

Genomic tracks for Chromosome 13. The top track shows a chromosome ideogram with a red 'X' indicating a specific region. Below is a coverage plot (RPGC) with a y-axis from 0 to 20. The plot shows a large peak reaching nearly 20 RPGC, with smaller peaks around 2 RPGC. A red vertical line marks the center of the main peak. Below the coverage plot is a gene model track showing two genes: one with a single exon and one with two exons, both represented by yellow arrows. The red vertical line passes through the first gene.
